OVERVIEW

PDF4NET is a .NET library for adding PDF capabilities in your .NET applications. Its simple and easy to use object model allows creating complex PDF documents or import existing PDF files with a few lines of code. Written entirely in C#, it is a 100% .NET component, not just a COM wrapper. And not to forget, ROYALTY FREE distribution.

PDF4NET 10 is the next generation of our well known PDF library PDF4NET. For the past 2 years we worked hard to bring PDF4NET up to date to latest technologies. This new release brings support for all .NET platforms, a fully rewritten internal architecture making it more testable and several new features that we could not support with the old version.

All these updates brought several breaking changes in the public API when compared to PDF4NET v5 but we're fully supporting the customers that wish the make the transition to the new PDF4NET.

STARTING FROM
US \$499

- Create PDF files with support for grid/flow layout
- Digitally sign PDF files with CMS/PAdES signatures and LTV support
- Native support for 1D and 2D barcodes

Try [PDFView4NET](#). View, fill, annotate and print PDF files from your .Net application.

REVIEWS & TESTIMONIALS

Visual Studio Magazine March 2004 issue

O2 Solutions' PDF4NET opens the world of Portable Document Format (PDF) documents-and a new approach to .NET reporting-to your applications. Its powerful yet easy-to-use class library allows you to generate and edit PDF documents from C#, VB.NET, or any other .NET language.

Now, it seems to work perfectly. Thanks for noticing the missing blank line. Quick support can sometimes be crucial, and you certainly have a high service level!

Olof Åsberg, [Handels Akademien AB](#)

Thanks for your effort. I also like to tell you that the library as it is now works great!

Jos Verbeek, [Symsys B.V.](#)

Keep up the good work. I just love your product!

Roy Harding, [WebXtend](#)

I must say PDF4NET rocks! It's very easy to work with.

Florin Rikard, [Goldnet A.B.](#)
